DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 7, 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 7, 13 recite a “second control signal”, but a “first control signal” is not seen.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7-9, 13-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Jensen et al. (5,724,003)

Regarding claims 7, 13, Jensen et al. (Fig. 6) disclose a control system comprising: a power detector (418) coupled to the output (408) of a power amplifier (402) for measuring an output power level; an error amplifier (424) for comparing reference signal (422) and the output power level (420) and generating an error signal (510); and deriving a second control signal (510).

Regarding claims 8, 14, wherein the second control (510) controlled a gain applied to the signal output from the power amplifier by a VGA (412).

Regarding claims 9, 15, wherein the VGA (412) can be a variable attenuator.

Claims 7-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Raynaud et al. (5,430,410).

Regarding claims 7, 13, Raynaud et al. (Fig. 4) disclose a control system comprising: a detector (15) coupled to the output (V_s) of a power amplifier (10) for measuring an output power level; a comparator (16) for comparing reference signal (V_{ref}) and the output power level (V_d) and generating an error signal; and deriving a second control signal (S) by control (17).

Regarding claims 8, 9, 14, 15, wherein the second control signal (S) controlled a gain applied to the signal output from the power amplifier by an attenuator (12).

Regarding claims 10-12, 16-18 wherein voltage converter (21) can be read as an adjustable buck voltage converter, which is capable of configuring and operating as recited.

Allowable Subject Matter

Claims 1-6 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Claims 1-6 call for, among others, a second comparator having the function thereof.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Webb et al. (4,124,825); Youn (5,043,672); Damgaard et al. (6,670,849) ; Kao (6,816,013)) disclose amplifier having feedback variable gain control.
